

WALT: multiply numbers by 10, 100 and 1000

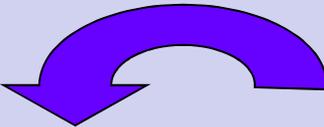

We will use this place value grid to help us work out the answer

Th	h	t	u

If we multiply any digit by 10 it will move one column to the left

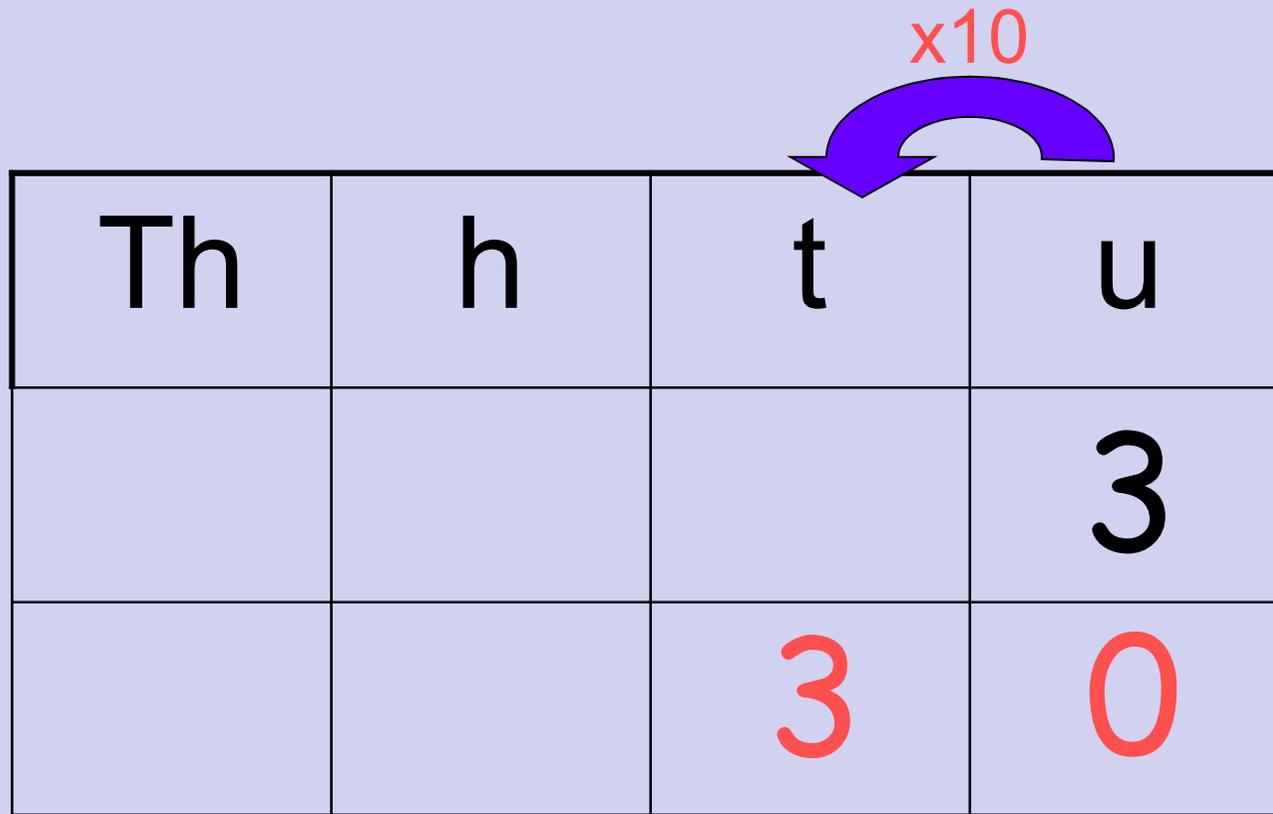

x10

Th	h	t	u
			6
		6	0

We must put a 0 in the empty units column to hold the place so $6 \times 10 = 60$

Let's look at another number

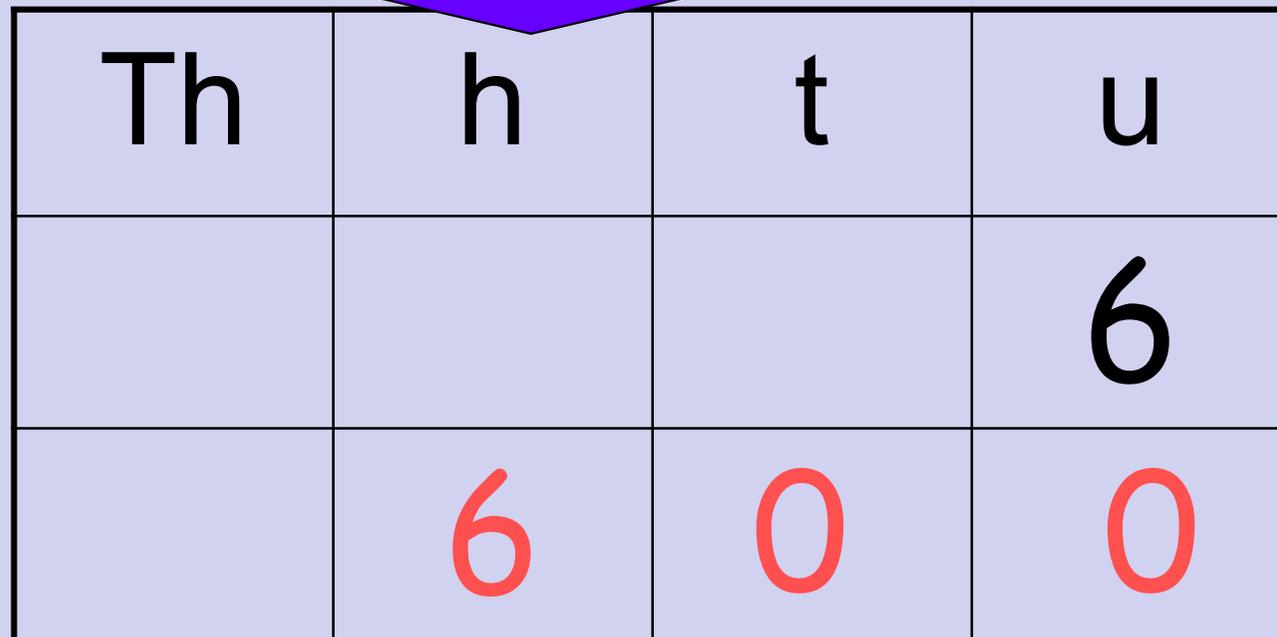

Th	h	t	u
			3
		3	0

Then we must remember to put the zero in to hold the digits in place!

$$3 \times 10 = 30$$

If we multiply any digit by 100 it will move two columns to the left

X 100

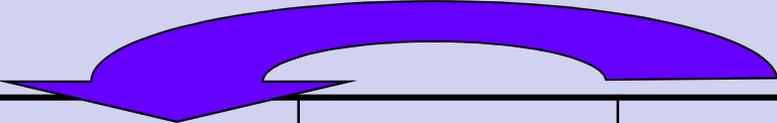

Th	h	t	u
			6
	6	0	0

We must put a 0 in the empty columns to hold the place -
 $6 \times 100 = 600$

Let's try another number...

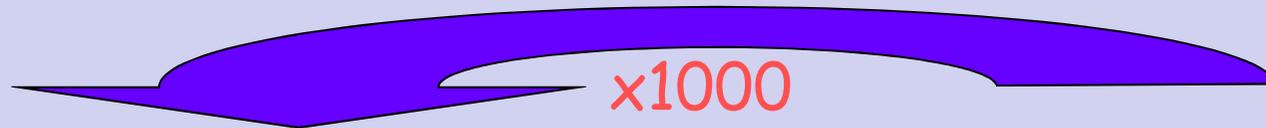

X 100

Th	h	t	u
			9
	9	0	0

We must put a 0 in the empty columns to hold the place -
 $9 \times 100 = 900$

If we multiply any digit by 1000 it will move three columns to the left

Th	h	t	u
			6
6	0	0	0

We must put a 0 in the empty columns to hold the place -
 $6 \times 1000 = 6000$

Let's try these examples!

$$9 \times 10 = 90$$

$$13 \times 10 = 1300$$

$$6 \times 1000 = 6000$$

$$14 \times 100 = 1400$$

$$5 \times 100 = 500$$

Write the answers on your
whiteboards.

Remember....

If you are \times by 10 you move the digits ONE column to the left

If you are \times by 100 you move the digits TWO columns to the left

If you are \times by 1000 you move the digits THREE columns to the left

Don't forget to include the 0's to hold the place value!

Th	h	t	u
